PROFILE

Software engineer with nearly 2 years of experience building production systems at Chaldal (YC-backed startup). Architected Chaldal's Inventory Platform, optimized API latency, and built an ML pipeline. Full-stack developer with an interest in system design and infrastructure.

TECHNICAL SKILLS

Languages: C#, F#, C++, Python, Javascript, Golang, Bash

Frameworks & Libraries: React, Microsoft Orleans, gRPC, RabbitMQ, Tailwind CSS

Infrastructure & DevOps: Kubernetes, Docker, Linux, Git, GitHub Actions, AWS, Prometheus, Grafana, Istio

Databases: SQL Server, PostgreSQL, SQLite, MongoDB, Snowflake

EXPERIENCE

- **Chaldal - *chaldal.tech* - Y Combinator Startup** July 2024 - Present
L2 Software Engineer - Supply Chain and Operations Team Dhaka, Bangladesh
Tech Stack: C#, F#, React, SQL Server, gRPC, Microsoft Orleans, Kubernetes
 - Reduced *chaldal.com* homepage's product listing and search API latency by 60% through cache call and DB query optimization.
 - Implemented the state machine, API and unit testing for Chaldal's financing platform that raises working capital from investors. The platform serves 250+ active investors and funds approximately 65% of the inventory demand.
 - Designed a scalable system that tracks each item's movement across our inventory and reports live status and profit/loss to investors. The system processes ~300K items at a time.
 - Built a new prediction pipeline and backfilled 6 years of sales data to integrate our core backend with an ML microservice. The model is projected to save at least \$100K per year compared to our previous model.
 - Took ownership of two microservices – one sourcing perishable products, the other managing capital raised from investors – serving as primary on-call engineer for over a year and resolving 40+ critical production alarms to maintain operational continuity.

PROJECTS

- **Lazygit** - github.com/jesseduffield/lazygit/pull/3919
Improved launch time by ~330x in repositories with a large number of files by implementing efficient data structures.
Tech Stack: Golang
- **Maya Natural Match** - maya-naturalmatch.com
Set up CD pipeline, cloud hosting, and analytics for an LLM-based haircare product recommendation site for Maya (Square Group). Serves ~300 daily users.
Tech Stack: AWS, Docker, Docker Compose, GitHub Actions
- **Multi Objective Scheduling Framework For Kubernetes** - *Repo private as part of ongoing research*
Testing framework in Python as part of my undergraduate thesis on the Kubernetes scheduler. Facilitates benchmarking scheduling algorithms on microservices' performance.
Tech Stack: Python, Kubernetes, Docker, Prometheus, Grafana, Istio
- **MEDist** - github.com/parthokunda/CSE-408-MEDist
Developed a microservice-based platform enabling online patient appointment booking and providing doctors with tools for e-prescribing and managing consultations.
Tech Stack: React, Javascript, Tailwind CSS, RabbitMQ

EDUCATION

- **Bangladesh University of Engineering & Technology** April 2019 – June 2024
B.Sc. in Computer Science and Engineering - GPA: 3.90/4.00. Top 22% Dhaka, Bangladesh

EXTRACURRICULAR ACTIVITIES

- Achieved Expert rank in Codeforces. Link: codeforces.com/profile/dont_ask_my_name
- 1st Runner-Up in a national-level Math Olympiad.
