PROFILE

Software engineer with 1.5+ years of professional experience working in fast-paced production environment. Currently at Chaldal (YC-backed) where I have architected Chaldal's Inventory Platform, optimized API latency and built an ML pipeline. Comfortable across both frontend and backend, with an interest in distributed systems and infrastructure.

Languages: C#, C++, Python, TypeScript, F#, Golang, Bash

Frameworks & Tools: React, Linux, Git, Kubernetes, Docker, SQL Server, Microsoft Orleans, Vim

EXPERIENCE

• Chaldal - chaldal.tech - Y Combinator Startup

July 2024 - Present

Dhaka, Bangladesh

L2 Software Engineer - Supply Chain and Operations Team

Tech Stack: C#, F#, React, SQL Server, GRPC, Microsoft Orleans, Kubernetes

- Reduced chaldal.com homepage's catalog-related API latency by **60%** through backend optimization.
- Implemented the state machine, API and unit testing for Chaldal's Inventory Platform project. To date, the project has more than **250** active investors and funds approximately **65%** of the inventory demand.
- Designed a scalable system to track each item's movement across our inventory for Inventory Platform project. Currently the system processes about **300K** items at a time.
- Built a new prediction pipeline and backfilled 6 years of sales data to integrate our core backend with an ML microservice. The model is projected to save at least **\$100K** a year compared to our previous model.
- Migrated both backend and frontend of Chaldal Vegetable Network **from Service Fabric to Kubernetes**.

PROJECTS

• Lazygit - github.com/jesseduffield/lazygit/pull/3919

Improved launch time ~330x in repositories with a large number of files by implementing a more efficient data structure.

Tech Stack: Golang

• Maya Natural Match - maya-naturalmatch.com

Built CD pipeline, cloud hosting, and analytics for an LLM-based haircare product recommendation site for Maya (Square Group). Live in production with ~300 daily users.

Tech Stack: AWS, Docker, Docker Compose, GitHub Actions

• Multi Objective Scheduling Framework For Kubernetes - Repo private as part of ongoing research

Testing framework in Python as part of my undergraduate thesis on the Kubernetes scheduler. Facilitates benchmarking scheduling algorithms on microservices' performance.

Tech Stack: Python, Kubernetes, Docker, Prometheus, Grafana, Istio

• MEDist - github.com/piratepartho/CSE-408-MEDist

Developed a microservice-based platform enabling online patient appointment booking and providing doctors with tools for e-prescribing and managing consultations.

Tech Stack: React, TypeScript, Tailwind CSS, RabbitMQ

EDUCATION

• Bangladesh University of Engineering & Technology

Dhaka, Bangladesh

B.Sc. in Computer Science and Engineering - GPA: 3.90/4.00. Top 22%

Apr. 2019 – Jun. 2024

EXTRACURRICULAR ACTIVITIES

• Competitive Programming: Participated in online contests for 3+ years. Achieved Expert rank in Codeforces.

Link: codeforces.com/profile/dont_ask_my_name

• Math Olympiad: 1st Runner Up in National level Math Olympiad.
